

## VOIS | BIOMETRIC

# Positive identification to eliminate duplicate identities

Clear identification and allocation of personal data is a problem that is becoming more and more important. Especially in a more and more digital world, where the protection of one's own identity is more important than ever. We consider it indispensable that the control of the personal data lies in the hands of each individual and a transparently working public hand.

With VOIS | BIOMETRIC we offer a module within VOIS that the currently highest demands on encryption, security and access transparency are met.

Integration underpins Citizen Centricity and ultimately provides Citizens with the services they need better, cheaper and faster.

In addition to classic fingerprints, the system offers the possibility of identification by means of IRIS and/or Face ID. All possibilities of biometric recording and identification can be used independently or combined as desired.

Thumb

## What distinguishes VOIS | BIOMETRIC:

- Highest encryption standard currently available
- Separate data storage of biometric data and personal data
- Modular design for use by other VOIS specialized programs
- Defined interfaces for connecting external specialized programs – Integration into external systems via API's
- Strict logging of queries and accesses
- Database queries close to real time
- Avoid duplication to ensure efficient identity management
- Identity biometrics getting attached/updated/removed over the whole life cycle
- Identity management with a maximum of data protection and security in mind
