

VOIS

Server

Overview

The VOIS server is JAVA based. It runs modules called bundles and prevents side effects between them as much as possible. Aside the very focused and specialized value propositions of the content modules it offers them a set of basic functions and services:

- User Management
- Configuration
- Principle Management
- License Management
- Certificate Management
- Update Processing
- Data Sources (Repositories)
- Time controlled Server Task (similar to CronJobs)
- Printing Service
- Integration Management (DMS , GIS, ERP, Mail Server etc.)
- Search
- Maps
- Reference Data (e.g. Addresses)
- Logging
